DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 21, 23, 45, 46, 48, 70, 71 are rejected under 35 U.S.C. 102(e) as being anticipated by MacDonald, Jr. et al.

MacDonald, Jr. et al disclose a printed wiring board (10), a plurality of components (12, 14), an electrically continuous conformal EMI shield comprising a thermal conductive coating (40) made of a solid material such as silicone elastomer and aluminum oxide (col. 3, line 65)(re claims 23, 48, 71) and a conductive coating (28)(re claims 21, 45, 46, 70).

Response to Arguments

Applicant's arguments filed 04-15-2004 have been fully considered but they are not persuasive.

Applicant argues (1) that MacDonald neither discloses nor suggests providing an electrically non-conductive, thermally conductive contiguous solid layer

With respect to (1) MacDonald, Jr. et al disclose an electrically non-conductive, thermally conductive contiguous solid layer (40) made of silicone elastomer. MacDonald recites “when molded the thermally conductive gel is cast to form negative cavities 42 matching the placement of components” (col. 3, lines 62-65), “In addition to dissipation of heat, the gel 40 adheres to the chip 12, 14 and PCB 10 by surface tension” (col. 4, line 10), “this surface tension contact is also sufficient to exclude moisture” (col. 4, line 16). If the conductive gel were in a liquid state, it would not be able to exclude moisture. Also, the dictionary defines that gel is a colloid in which the disperse phase has combined with the continuous phase to produce a semi-solid material (Webster’s II)

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Allowable Subject Matter

Claims 22, 24-44, 47, 49-69, 72-75 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
